Best Choice For All Your Machining Needs

- CNC Machining
- Contouring
- Cut To length

At Rimac we have a full service machine shop, capable of handling your machining needs. With milling capabilities of full stock lengths, the machining possibilities are endless.

In house machining enables Rimac to avoid the long lead times associated with using outside sources. At Rimac we can produce tooling, and make final adjustments immediately. This greatly reduces the time required to turn around our curved metal products, and directly benefits our customers.

"At Rimac Personal Service Is What We Are About"

Parts can be cut to exact lengths and exact angles, in straight lengths, or after curving. Rimac has double headed compound miter saws, which cut fast and with extreme accuracy.

At Rimac parts can be curved, cut to length, drilled, punched, and even coutoured on our 5 axis CNC machining center, allowing us to supply our customers with complete parts ready for assembly.
